## **ABSTRACT**

This study looks at the impact of remittances on well-being of children aged under 5 in Punjab, Pakistan. By using the logistic regression model, we analyze the impact of remittances on well-being in terms of child's nutritional status, child's functioning ability and early childhood development. Data has been taken from the Multiple Indicator Cluster Surveys 2017-18. The empirical evidence shows that remittances effect children's nutritional status and early childhood development positively and significantly whereas the impact becomes insignificant for children's functioning ability as more variables (household/ children's characteristics) are added in the model.

## **ACKNOWLEDGMENTS**

Foremost, I would like to thank my thesis supervisor, Dr. Nasra Shah for her continuous support, motivation and immense knowledge. Without her guidance and persistence, this thesis would not have been possible. I would also like to thank Dr. Rashid Amjad and the entire faculty of Graduate Institute of Development Studies (GIDS) for providing me with this opportunity and also for their insightful comments that enabled me to improve my work.

I would also like to extend my gratitude to Ms. Samar Quddus for her guidance that allowed me to successfully complete my work. In addition, I would like to thank my friend Kiran Zahra for her constant support without which I would not have been able to get this far. Lastly, I would like to thank my husband, Jibran, for always pushing me to complete my work and for his undying support.
